

AI & SIGNAL PROCESSING HUB

FINAL DESIGN OVERSIGHT REPORT

Official Website Design & Digital Brand Identity

Prepared by: Prudence Revelian - Design Overseer
Project: AI & Signal Processing Hub Official Website
Document Type: Final Design Requirements & Approval Report
Status: Final Design Direction

1. Executive Summary

This report presents the final design direction, requirements, and recommendations for the official website of the AI & Signal Processing Hub.

The purpose of the website is to establish a professional digital presence that clearly communicates the Hub's identity, mission, research activities, innovation projects, technical communities, members, achievements, and opportunities for collaboration.

As Design Overseer, the objective is not simply to produce an attractive website. The website must function as a professional digital representation of the Hub and should communicate the following qualities:

- Innovation
- Artificial Intelligence
- Signal Processing
- Research and academic excellence
- Technology development
- Collaboration
- Creativity
- Professionalism
- Community impact
- Future-oriented thinking

The final design should therefore combine a clean modern interface, strong technical visual language, consistent branding, authentic photography, structured information architecture, and responsive user experience.

2. Project Objective

The primary objective is to design and develop an official website that serves as the central digital platform for the AI & Signal Processing Hub.

The website should allow visitors to:

- Understand who the Hub is
- Learn about its mission and vision
- Explore its research areas
- Discover the seven subgroups
- View projects and innovations
- Meet the team
- Discover events and activities
- Access publications and resources
- Connect with the Hub
- Follow its social-media platforms
- Identify opportunities to participate or collaborate

The website should work effectively on:

- Mobile phones
- Tablets
- Laptops
- Desktop computers

Mobile-first design is strongly recommended, since a significant portion of users will access the website through smartphones.

3. Brand Identity.

Official Name: **AI & Signal Processing Hub**

Official Tagline: **“Incubator for AI Minds.”**

The tagline should appear selectively in major brand touchpoints such as the homepage hero section, presentation materials, promotional materials, and selected social-media assets.

4. Mission

«To pioneer cutting-edge research and innovation in AI and signal processing, empowering the next generation of technologists and researchers to solve real-world challenges through collaborative excellence.»

The mission should be presented prominently on the About page and summarized appropriately on the homepage.

5. Vision

«To become a global leader in AI and signal processing innovation, fostering a vibrant ecosystem where creativity meets technology and where every member contributes to transforming industries and society.»

The vision should communicate the Hub's long-term ambition and should be visually separated from the mission.

6. Core Brand Personality

The website design should consistently communicate:

Innovative | Intelligent | Technical | Professional | Collaborative | Creative |
Research-driven | Future-oriented

The design must avoid looking like a generic student-club website.

The Hub should visually appear as a serious technology, research, and innovation ecosystem.

7. Final Brand Color System

The currently approved primary colors are:

Primary Color - Deep Navy #0A2472

Usage:

- Navigation
- Headings
- Hero sections
- Footer
- Major backgrounds
- Brand elements

Secondary Color - Golden Amber #FFBA08

Usage:

- Buttons
- Highlights
- Icons
- Important statistics
- Lines
- Calls-to-action
- Hover states

Recommended Supporting Colors

White #FFFFFF

For clean backgrounds and readable content.

Light Gray #F5F7FA

For section backgrounds and cards.

Dark Text #111827

For readable body text.

The supporting colors should never compete with the primary Deep Navy and Golden Amber identity.

8. Typography System

The website should use a clean, modern sans-serif typography system.

Recommended Primary Heading Font

Montserrat / Space Grotesk

Recommended Body Font

Inter / Roboto

Typography hierarchy should clearly distinguish:

- Page titles
- Section headings
- Subheadings
- Body content
- Captions
- Buttons
- Navigation

The same typography system should later be applied to posters, presentations, certificates, research graphics, and social-media content.

9. Logo Requirements

The current AI Hub logo should be treated as the foundation of the website's visual identity.

The final website should use a high-quality vector version of the logo.

Required Logo Assets

- Full-color logo
- Transparent PNG
- SVG/vector version
- Icon/mark
- Horizontal version
- Stacked version
- Monochrome version
- White/reversed version

Design Oversight Requirement

The logo must maintain:

- Correct proportions
- Clear spacing
- Consistent colors
- No distortion
- No unauthorized effects
- No unnecessary shadows or modifications

10. Visual Design Language

The website should combine AI, data, signal processing, and human innovation.

Recommended visual elements include:

- Signal waveforms
- Neural-network nodes
- Data visualization
- Digital grids
- Frequency graphs
- Circuit-inspired patterns
- Connected nodes
- AI-generated abstract structures
- Technical diagrams
- Research imagery
- Real Hub activities

The visual language should remain minimal and purposeful.
The website should not be overloaded with random futuristic graphics.

11. Website Information Architecture

The official website should contain the following major sections:

01. HOME

The homepage should immediately communicate:

Who we are → What we do → Why it matters → How to engage

Recommended Hero Section

AI & SIGNAL PROCESSING HUB
Incubator for AI Minds.

Pioneering research, innovation and technology for real-world impact.

Primary buttons:

Explore Research

Join the Hub

12. ABOUT THE HUB

The About section should contain:

About Us

A concise explanation of the Hub.

Mission

Official mission statement.

Vision

Official vision statement.

Our Values

Suggested values:

- Innovation
- Excellence
- Collaboration
- Integrity
- Creativity
- Continuous Learning
- Impact

Our Story

A timeline showing:

Foundation → Growth → Projects → Achievements → Future

This section should use authentic Hub photographs wherever possible.

13. RESEARCH & INNOVATION

This should be one of the strongest sections of the website.

It should present the Hub as a research and innovation platform, not merely a technology-interest group.

Possible research categories include:

- Artificial Intelligence
- Machine Learning
- Signal Processing
- Digital Signal Processing
- Image Processing
- Audio & Speech Processing
- Computer Vision
- Data Science
- Robotics
- IoT
- Embedded Systems
- AI Applications

Each research area should have a short explanation and relevant projects.

14. PROJECTS

The website should provide a dedicated project showcase.

Every project should follow a consistent structure:

Project Title

Problem

What real-world problem is being addressed?

Technology

What technologies, models, tools, or methods are being used?

Solution

What has the team developed?

Impact

What value does the project create?

Team

Who worked on the project?

Status

- Proposed
- Researching
- Development
- Testing
- Completed

Where available, projects should include:

- Screenshots
- Demonstration videos
- Research papers
- GitHub repositories
- Documentation
- Results

15. SEVEN SUBGROUPS

The official website should provide a dedicated section for the Hub's seven subgroups.

1. Python Programming

Focus:

- Python development
- Automation
- Data processing
- AI programming
- Software development

2. Web Development & FastAPI

Focus:

- Backend development
- APIs
- Web applications

- FastAPI
- AI-powered applications

3. Ladies in ICT

Fostering young ladies in achieving their dreams in ICT.

Focus:

- ICT skills
- Mentorship
- Leadership
- Career development
- Women participation in technology

4. Research Team4 AI

Focus:

- AI research
- Signal-processing research
- Technical research
- Publications
- Innovation
- Experimental projects

5. Graphics Design

Focus:

- Graphic design
- Branding
- Visual communication
- UI/UX
- Creative technology

6. Signal Processing Club

AI & SIGNAL PROCESSING

Focus:

- Digital signal processing
- Audio processing
- Speech processing
- Image processing
- Communication signals
- Practical signal-processing projects

7. Smart Media Tech

“We create and They shine.”

Activities:

- Photography
- Videography
- Storytelling
- Creative design
- Event coverage
- Brand communication
- Digital media

16. TEAM PAGE

The Team page should present the Hub's human capital professionally.

Possible categories:

- Hub Leadership
- Coordinators
- Researchers
- Developers
- Designers
- Media Team
- Subgroup Leaders
- Members

Each profile should contain:

AI & SIGNAL PROCESSING

Photo → Full Name → Position → Subgroup → Short Bio

Where appropriate, profiles may include:

- LinkedIn
- GitHub
- Research profile
- Portfolio

17. EVENTS

The website should have an Events section for:

- Workshops
- Seminars
- Hackathons
- Training
- Conferences
- Competitions
- Community activities
- Research presentations

Each event should include:

- Event name
- Date
- Location
- Description
- Poster
- Registration link
- Photos after completion

18. MEDIA & NEWS

The Media section should contain:

News

Official Hub announcements and updates.

Gallery

Authentic photographs from:

- Workshops
- Meetings
- Research
- Projects
- Competitions
- Community activities

Videos

- Project demonstrations
- Tutorials
- Event highlights
- Interviews
- Presentations

This section should demonstrate that the Hub is active and productive.

19. ACHIEVEMENTS

A dedicated achievements section should highlight:

- Awards
- Competitions
- Research publications
- Successful projects
- Partnerships
- Certifications
- Major milestones

The presentation should focus on evidence, not exaggerated claims.

20. CONTACT PAGE

The Contact page should provide:

Phone: +255 682 929 923

Email: ai.signalprocessinghub@gmail.com

LinkedIn: AI and Signal Processing Hub

Instagram: AI.signalprocessinghub

The final website should also include:

- Contact form
- Physical location
- Google Maps integration where appropriate
- Social-media links
- QR code
- Official email call-to-action

21. HOMEPAGE DESIGN STRUCTURE

The recommended homepage flow is:

22. User Experience Requirements

The website must be:

- Responsive
- Fast-loading
- Easy to navigate
- Accessible
- Mobile-friendly
- Search-engine friendly
- Visually consistent
- Easy to maintain

Navigation should remain simple.

Recommended Main Navigation

Home | About | Research | Projects | Subgroups | Team | Events | Media | Contact

On mobile devices, this should collapse into a clean hamburger navigation.

23. Design Components

The website should have a reusable component system including:

- Navigation bar
- Hero sections
- Buttons
- Cards
- Project cards
- Research cards
- Team cards
- Event cards
- Statistics
- Timeline
- Testimonials where applicable
- Forms
- Footer
- Modal windows
- Search/filter components

This will make future website updates easier and maintain consistency.

24. Social Media Integration

The website should connect directly with the Hub's official social platforms.

The social section should provide links to:

- LinkedIn
- Instagrams

- YouTube
 - Other verified official platforms
- Social-media content should use the same:

Logo + Color + Typography + Visual Language
as the website.

25. Design Assets Required Before Development

Before the website enters final development, the following assets must be submitted:

Brand Assets

- [] Final logo
- [] SVG logo
- [] PNG logo
- [] Logo variations
- [] Brand colors
- [] Typography
- [] Brand guidelines

Content Assets

- [] Mission
- [] Vision
- [] About information
- [] History
- [] Seven subgroup descriptions
- [] Leadership information
- [] Member information
- [] Project information
- [] Research information
- [] Achievements

Media Assets

- [] Team photographs
- [] Leadership photographs

- ☐ Project photographs
- ☐ Event photographs
- ☐ Videos
- ☐ Partner logos
- ☐ Research graphics

Communication Assets

- ☐ Official email
- ☐ Phone number
- ☐ Social-media links
- ☐ Physical address
- ☐ Google Maps location

26. Design Quality Control

As Design Overseer, the following standards should be mandatory before final approval.

Visual Consistency

Every page must follow the same brand system.

Content Accuracy

No information should be published without confirmation from the responsible Hub leadership.

Responsive Design

The website must be tested on:

- Mobile
- Tablet
- Laptop
- Desktop

Accessibility

Text must have sufficient contrast, buttons must be readable, and navigation must remain understandable.

Performance

Large images and unnecessary animations should be optimized to prevent slow loading.

Professionalism

No unfinished pages, placeholder text, broken links, inconsistent fonts, or low-quality images should appear on the public website.

27. Critical Design Direction From the Overseer

The biggest risk is creating a website that looks futuristic but communicates very little.

The Hub should not attempt to prove that it is an AI organization through excessive AI graphics.

Instead, the website should prove its credibility through:

Research + Projects + People + Results + Innovation + Impact

Therefore:

«Real work should be the visual centerpiece of the website.»

A visitor should be able to enter the website and quickly answer five questions:

1. Who are you?
2. What do you research?

3. What are you building?
4. Who is involved?
5. How can I work with you?

If the website cannot answer these questions within a few minutes, the design has failed regardless of how beautiful it looks.

FINAL STATUS

Design Direction: APPROVED

Brand Foundation: ESTABLISHED

Website Structure: PROPOSED & READY FOR UI DESIGN

Content Requirements: DEFINED

Design System: DEFINED

Development: READY TO PROCEED AFTER CONTENT VALIDATION

Prepared by: Prudence Revelian.
